

Problem when running PC-Cost

The error below occurs when a database registry entry is missing for PC-Cost.

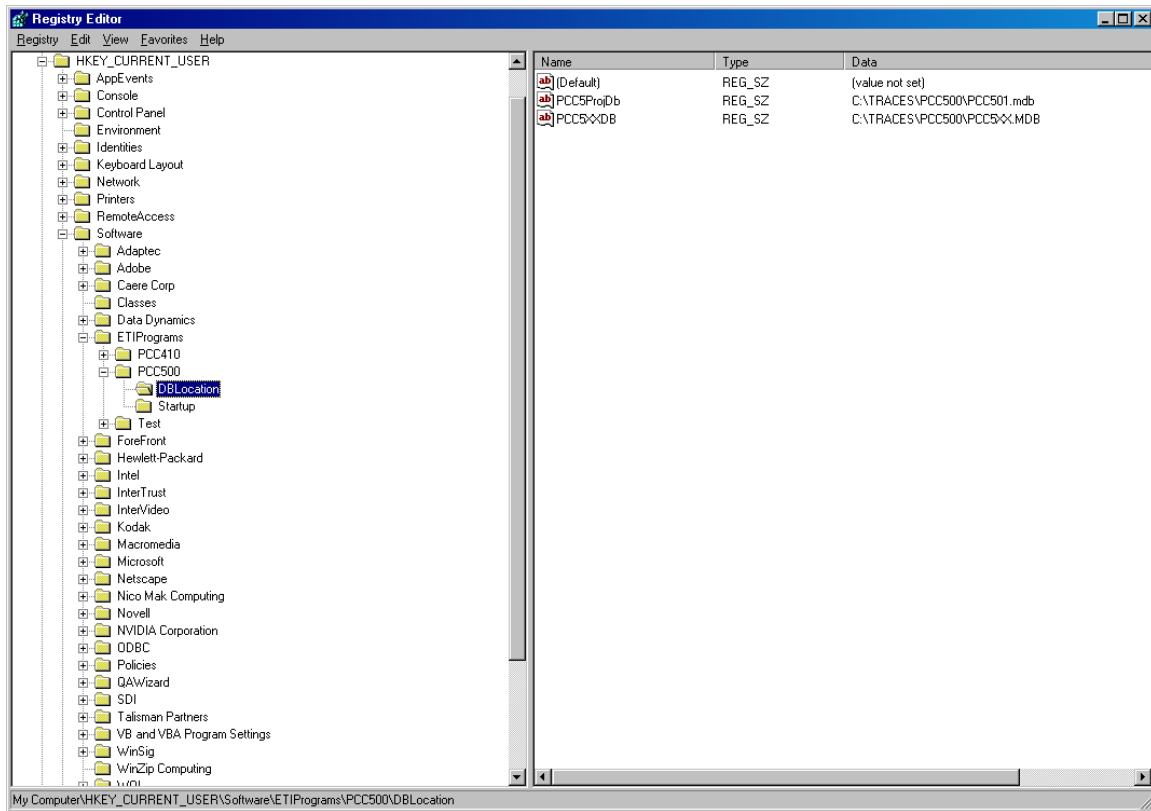

The solution to the problem is to manually update the registry by following the steps below (IMPORTANT: You must have ADMIN rights to update the registry on a Win NT / 2000 Machine).

1. Open the registry by clicking on the Start button, then Run
2. Type REGEDIT and click OK, the following screen will appear.

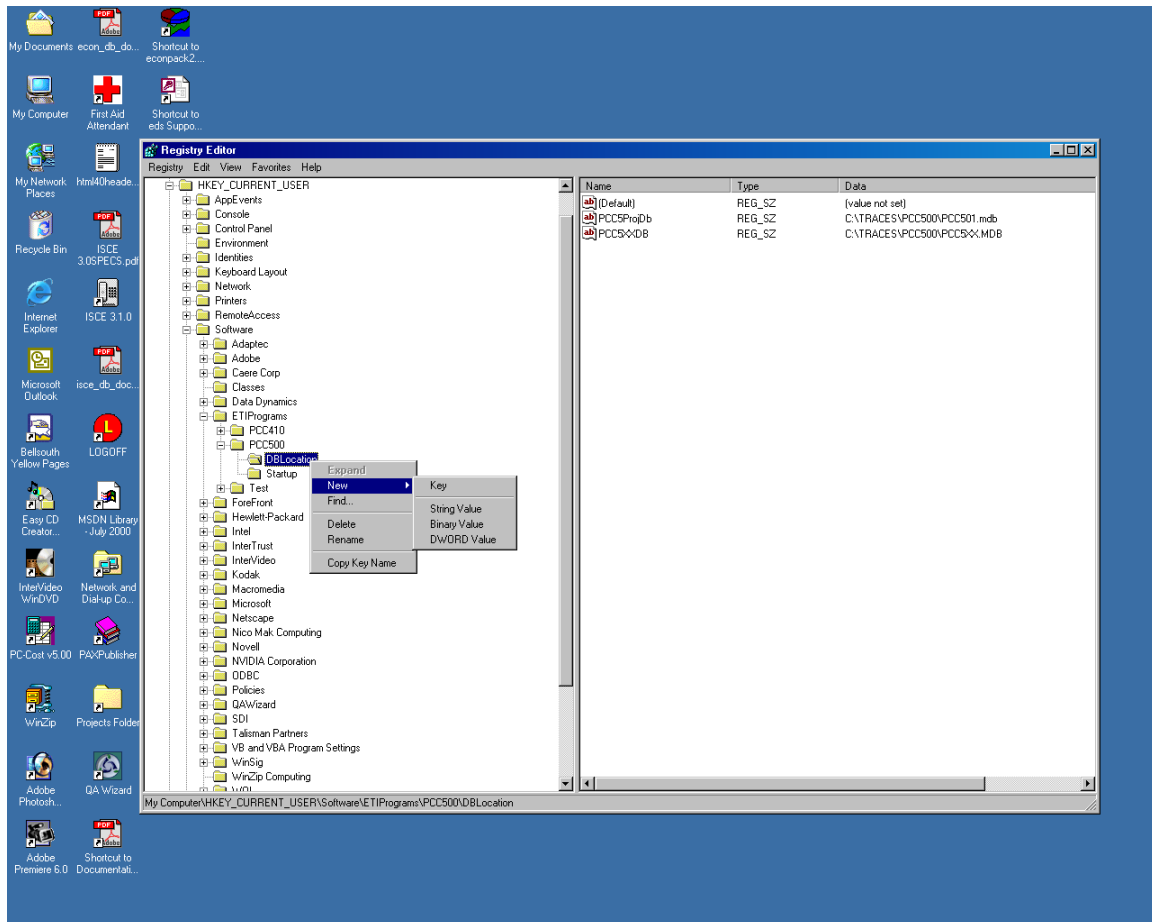

3. Drill down to the correct Registry key:

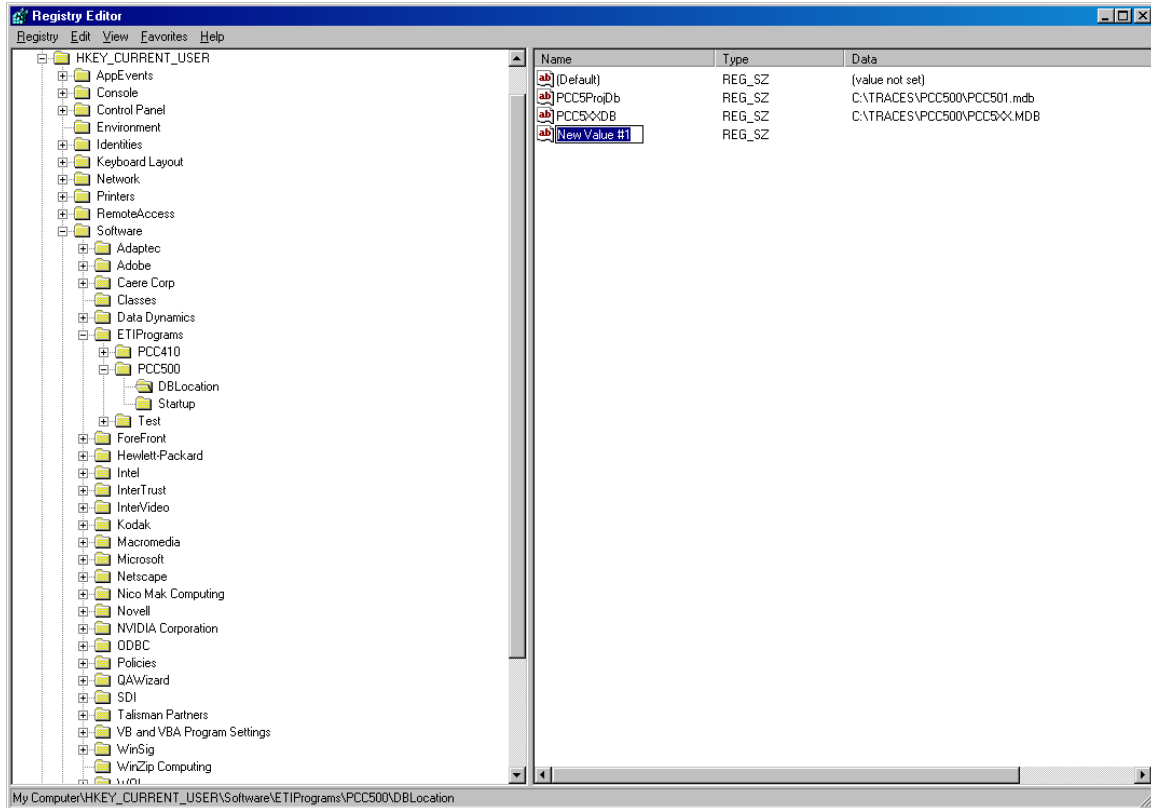

\HKEY_CURRENT_USER\Software\ETIPPrograms\PCC500\DBLocation

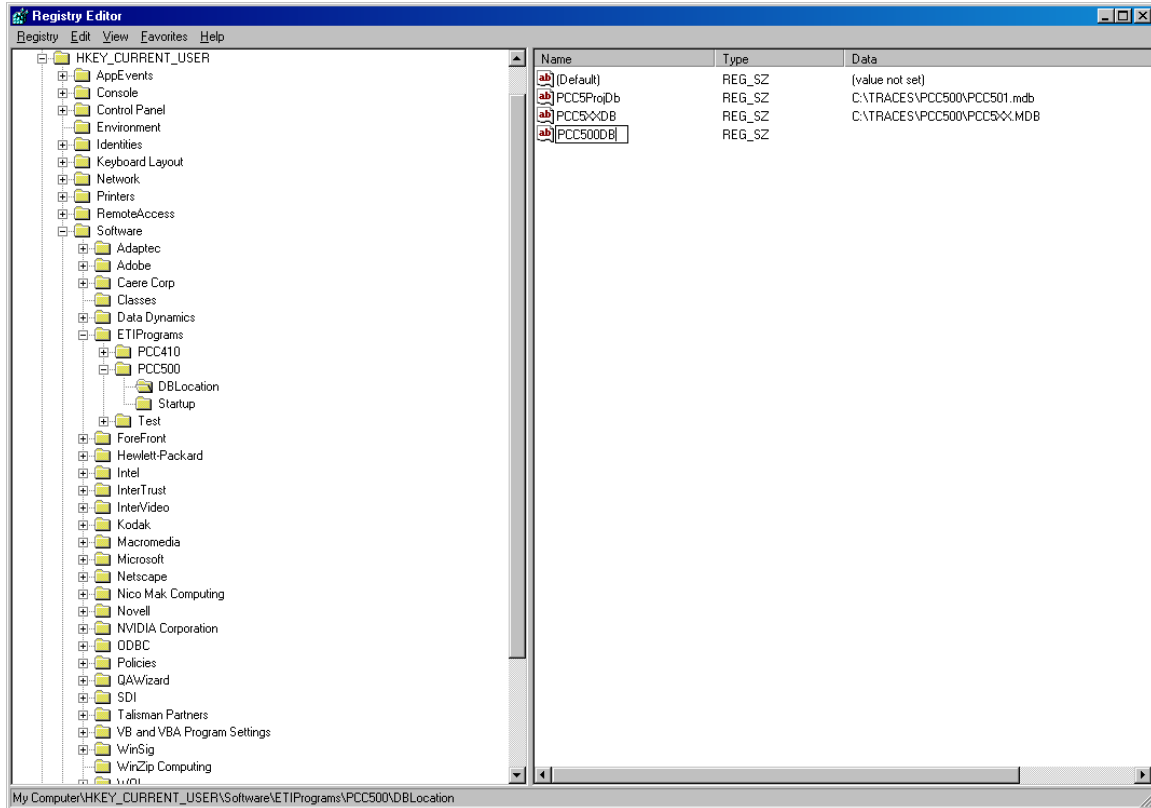

4. Right mouse click on the highlighted folder above (DBLocation), and choose New String Value (see screen below):

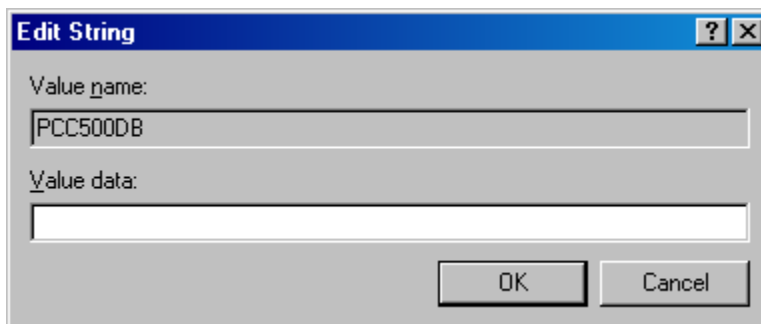

5. After choosing 'New String Value' the following screen will appear:

6. In the highlighted area type **PCC500DB** (see screen below):

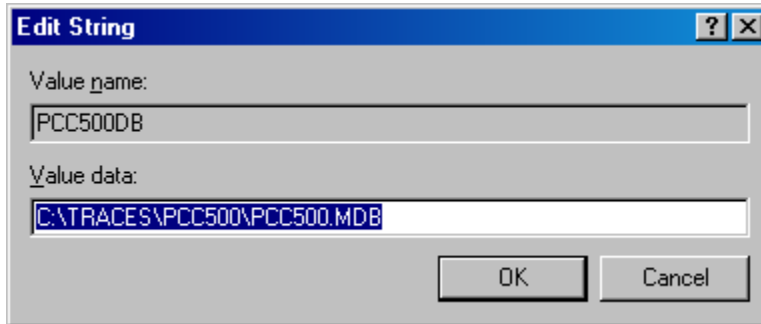

7. Right mouse click on PCC500DB and click Modify (the following screen will appear):

8. In the Value data: field type the following:

C:\TRACES\PCC500\PCC500.MDB

9. Click OK and close the Registry Editor by clicking on the Registry | Exit menu option.
10. Try running PC-Cost 5.0 again.
